This position troubleshoots network performance issues, provides administrative software support and participates in network systems implementation projects in accordance with the mission, core values, and purposes of the university.

Minimum Qualifications
The IT Application Developer I must satisfy the following minimum qualifications:
1. High school diploma or GED equivalent required, advanced degree in IT, CIS, computer science or similar field preferred; and
2. Two years of experience with a variety of server-side and client side programming languages; experience developing applications in Microsoft Visual Studio preferred.

Skills and Attributes
The IT Application Developer I must possess the following skills and attributes: planning; recordkeeping; reporting; training; answering phone; filing; typing; programming; calculating; problem solving; reasoning; performing preventive maintenance; reading - basic and technical; writing - basic and technical; word processing; manipulating spreadsheets; working with computer operating systems and networking hardware.

Essential Functions
The IT Application Developer I performs the following essential functions:
1. Analyzes and assesses existing business systems and procedures.
2. Contributes to the continuous improvement of development standards and processes.
3. Maintains and ports existing applications written in multiple languages to common platforms in use by the university.
4. Creates and updates technical documentation as required.
5. Identifies, recommends, and prioritizes new web features and applications in conjunction with business leaders and department managers.
6. Oversees web development projects, including intranets and extranets.
7. Consistently writes, translates, and codes software programs and web applications according to specifications.
8. Establishes policies and procedures for publishing web pages and applications in conjunction with content creators.
9. Diagnoses and troubleshoots problems with existing web applications and sites.
10. Works with database administrator to design, develop and update databases as they relate to software programs and web applications.
11. Ensures security of all web sites and related applications.
12. Monitors and reports on website traffic and performance.
13. Serves as a “backup” for other team members, seeks cross-training in their areas of expertise, and performs their duties in their absence.
14. Maintains ability and willingness to learn new technologies.
15. Performs other duties as assigned.

**Required Work Hours**

Forty hours per week during daytime, evening, and weekend hours. Scheduled work hours may change. Overtime may be required, or permitted with prior approval.

**Reporting and Supervisory Responsibilities**
